

## Short bio for Ingrid Marisa Tohver

Ingrid M Tohver is a research scientist for the Climate Impacts Group (CIG) at the University of Washington. Ingrid's research focuses on the responses of regional watersheds to the projections of a warmer climate for the future. In particular, Ingrid participates in studies assessing the projected shifts in the frequency and intensity of extreme hydrologic events. She is also responsible for writing reports detailing the implications for natural resource sectors in the region, including water supply, hydropower operations, agriculture, and fish habitat. Ingrid's work is in direct collaboration with resource managers, other researchers, aquatic habitat specialists and dam operators who use the data and reports culminating from CIG's hydrologic research. Ingrid also contributes to CIG's outreach efforts by giving presentations on hydrologic studies and CIG's broader research objectives to stakeholders and the general public. Ingrid graduated from the University of Michigan with a B.S. in botany, and from the University of Florida with a M.S. in forest science.
