

Brief bio for Cary Lynch, Ph.D.

Post-doc, University of Washington Climate Impacts Group

Cary Lynch is a research associate with the Climate Impacts Group at the University of Washington. She is interested in climate science communication as well as climate change mitigation and adaptation policy.

Cary obtained a Ph.D. from the University of Connecticut. Her dissertation involved the use of climate data from observations, reanalysis, and AOGCMs for a Northeast United States regional analysis of observed and projected modes of climate variability.

Her background is primarily in geoscience and climate. Cary has a M.A. from West Virginia University, during which she had a NASA fellowship to use dendroclimate, observations, and GIS to map wildfire and examine probable synoptic influences on fire events. She has a B.S. from Southern Illinois University, where she interned at the National Weather Service in Paducah, KY, and was an undergraduate assistant in meteorology.
